

MISSISSIPPI STATE DEPARTMENT OF HEALTH

GUIDELINES FOR VISITATION AT INTERMEDIATE CARE FACILITIES FOR INDIVIDUALS WITH INTELLECTUAL DISABILITIES

Revised 09/02/2020

Following the Centers for Medicare and Medicaid Services (CMS), Mississippi State Department of Health (MSDH) and Department of Mental Health (DMH) recommendations, people can visit loved ones in Intermediate Care Facilities for Individuals with Intellectual Disabilities (ICF/IIDs) when the following conditions are met:

- the county is not under the Governor's Executive Order for additional Community Mitigation Measures and Masks (https://msdh.ms.gov/msdhsite/_static/14,0,420.html);
- facility is not currently in active outbreak status. Outbreak means one or more cases among long-term care facility residents or 2 or more cases among staff within a 14-day period.
- the location is not experiencing staff shortages;
- adequate supplies of personal protective equipment (PPE) and essential cleaning and disinfection supplies are available;
- adequate testing for COVID-19 is available; and
- referral hospital(s) have bed capacity on wards and intensive care units.

Note: Visitation will be restricted if any of the above conditions are not met.

DMH ICF/IIDs will continue to follow CMS and the Centers for Disease Control (CDC) guidance for preventing the transmission of COVID-19. The following rules have been developed to reopen ICF/IIDs in a safe manner while mitigating the risk of possible outbreak or resurgence.

Guidelines for Visitation during Coronavirus Disease 2019 (COVID-19) Public Health Emergency to follow CMS.

1. No external groups may visit (i.e., singers, entertainment) at this time.
2. Social services or designated staff will notify families by telephone and/or letter regarding the visitation guidelines that are to be followed. Visitors will be required to sign an agreement in advance stating that they will follow all guidelines for visitation.
3. All visits must be scheduled in advance to ensure that the designated visitation area and staff are available for monitoring.

4. Signs will be posted at the entrance with instructions for visitors to be screened before entering the facility.
5. All visitors will have their temperature taken and be screened for COVID-19 symptoms. Anyone with a fever equal to or greater than 100.0°F, cough, shortness of breath, sore throat, myalgia, chills or new onset of loss of taste or smell will not be allowed to visit a person. If a visitor has fever and/or any COVID-19 symptoms or exposure to a known COVID-19 case, he/she will be asked to reschedule the visit.
6. Each visitor will be required to perform handwashing and/or use hand sanitizer. If hand sanitizer is used, the CDC recommends using Alcohol-Based Hand Rub (ABHR) with greater than **60% ethanol or 70% isopropanol**.
7. Visits should be limited to one (1) hour or less.
8. Visitors must wear a cloth face covering or facemask for the duration of their visit. The person being visited should wear a mask as tolerated. Visitors should be responsible for bringing their own face mask/cloth face covering.
9. It is recommended that social distancing of at least six feet be practiced.
10. Visitors should be monitored by staff during the visit.
11. The visitation room will be disinfected after each visitation.
12. Buildings that are on quarantine or isolation may not receive visitors. Those buildings that have recovered may.
13. Any visitor who develops symptoms consistent with COVID-19 within 72 hours of a visit must notify the facility within 24 hours.
14. Violation of these rules by the visitor may result in revocation of visitation rights.
15. According to the CDC, all healthcare workers and first responders are considered essential personnel; therefore, hospice, home health, therapists, nurses and dieticians may enter the facility if they are screened and follow infection control procedures.

Outdoor Visitation Guidelines

Visitation is recognized as an important part of an individual's health and well-being. It is known that congregate settings provide opportunities for increased risk for the spread of COVID-19. However, recent data show that the risks of virus transmission are lower in outdoor settings. Outdoor visitation may be considered for any facility if the facility does not have a current ongoing outbreak. Outbreak means one or more cases among long-term care facility residents or 2 or more cases among staff within a 14-day period. While facilities will remain in outbreak status until no additional cases are identified for 28 days, **outdoor visitation may occur if it has been at least 14 days since the last onset of illness**. Facilities should establish visitor areas that are protected from weather elements, such as porches, patios and other covered areas, or have a space large enough to house a temporary tent.

1. The facility must monitor the temperature in any outdoor visitation area.
2. Visits should occur only on days when there are no weather warnings that would put their visitors or persons at risk.
3. Adequate staff must be present to allow for personnel to help with outdoor transition of persons, monitoring of visitation, and cleaning and sanitizing areas after each visit.

4. Visitation areas must be cleaned and sanitized between visitations using an approved antiviral disinfectant. The visitation schedule must provide sufficient time in between visits for this process.
5. Visitors must participate in and pass the facility's screening process prior to each visit.
6. The facility screening process must include a screening questionnaire, which will record the identity of the resident visited, date, name, address and phone number of the visitor and the facility must maintain these records so that they can be made available upon request by the Mississippi State Department of Health Bureau of Health Facilities Licensure and Certification or Office of Epidemiology.
7. The questionnaire will also include a declaration regarding signs and symptoms of infection, contact and/or exposure to known COVID-19 positive persons, and any prior testing for COVID-19, and a statement that the visitor will inform the facility immediately if they develop symptoms within 72 hours of visiting or test positive for COVID-19 after visiting.
8. Visitors must not have signs or symptoms of COVID-19 for at least three (3) days prior to a visit.
9. If any visitor previously tested positive for COVID-19, they must not visit within 14 days of a positive test.
10. Residents must wear a cloth face covering during the visit, if able, and all visitors must always adhere to physical distancing (at least 6 feet apart) during visits.
11. Residents must have the ability to safely transition from their room to an outdoor visitation location.
12. Visitation will be limited to two (2) visitors per one resident at a time to minimize the number of people to which a resident is exposed.
13. Visitors must stay in designated outdoor visitation locations.
14. Visitation should be restricted to children 12 years of age or older. Visitors with children must be able to manage them, and children must be able to wear a face mask during the entire visitation. Special family circumstances warranting children under the age of 12 to visit can be approved by the facility.
15. Outdoor visitations should be rotated, and visitors must **schedule** visits in advance with the facility pursuant to the facility's scheduling process and available times.
16. Facilities should rotate and schedule visits at specific times such that the total number of visitors present at any one time does not exceed safe limits.
17. Visitation will only be allowed during select hours of each day as defined by the facility.
18. Visitation hours and limits should be determined by the facility's availability of outdoor space and the ability of staff to monitor for infection control measures.
19. The facility must **ensure** that hand sanitizer and extra facemasks are available.
20. Visitors must sanitize hands with an alcohol-based hand rub or by handwashing with soap and water when entering and exiting.
21. Visitors cannot eat during the visit but may provide food and beverage to the resident consistent with dietary considerations if approved by the facility.
22. The facility must monitor all visits carefully to ensure that masks are worn, and visitation policies are followed.

If the facility cannot provide the necessary supervision of outdoor visits to prevent breaches in infection control requirements, then the facility must suspend outdoor visitation.

Following CMS recommendations, people can receive a home visitation pass at DMH ICF/IIDs when the following conditions are met:

- the county is not under the Governor's Executive Order for Additional Community Mitigation Measures and Masks (https://msdh.ms.gov/msdhsite/_static/14,0,420.html); and
- the facility is not currently in active outbreak status (no new cases for in the last 14 days past most recent onset of illness).

The following rules have been developed to reopen ICF/IIDs in a safe manner while mitigating the risk of possible outbreak or resurgence.

Guidelines for Home Visitations/Passes Coronavirus Disease 2019 (COVID-19) Public Health Emergency to follow CMS:

1. Passes for home visits must be requested via social services.
2. The person must have access to a mask and hand sanitizer provided by the facility or the family prior to pass issuance.
3. The family and person will be informed about potential risks when going into the community, including the risk of exposure to COVID-19 and the increased risk of introducing COVID-19 to the facility upon return.
4. The person must be screened for COVID-19 symptoms prior to leaving the facility.
5. Families must sign a copy of and abide by home visit guidelines before a person's pass is approved.
6. Families picking up the person must have their temperature taken and be screened for COVID-19 symptoms. Anyone with a fever equal to or greater than 100.0°F, cough, shortness of breath, sore throat, myalgia, chills or new onset of loss of taste or smell will be discouraged from taking the person. If the family decides to proceed with the home visit, the family must provide proof of a negative COVID-19 test result before the person can be returned to the facility.
7. When family arrives, they must remain in their vehicle and call the number provided by the social worker to notify of their arrival. The facility staff will bring the person to the family.
8. Family members and persons must follow universal masking and social distancing while in the community.
9. Request that the individual(s) joining the person in the community wear a mask at all times while with the person.
10. Family members and persons must follow good hand hygiene procedures, including frequent use of alcohol-based hand sanitizer when soap and water is not available.
11. Family members should consider keeping a log of the person's activities in the community to allow for contact tracing purposes if any community outbreaks occur in businesses or places the person visited.
12. Upon return to the facility, the family's temperature must be taken.
13. Families must remain in their vehicle and call the unit to notify of their arrival. Staff will come and get the person.
14. The person shall be screened for COVID-19 symptoms prior to returning to their unit.

15. The facility will continue to conduct daily symptom screenings with person upon return to the facility.
16. Returning persons should practice social distancing as much as possible when out of their room in the facility for 14 days after their return.
17. As tolerated, returning persons should follow universal masking when outside of their room.
18. Cohorting of persons who come and go from the facility is recommended.
